JUMO ecoLine Lf-PVC Electrolytic Conductivity Cells

202923 Series (former 2EL5... Series)

- 2-electrode principle
- proven versions for industrial application
- \blacksquare measuring ranges: 0 1 mS/cm (K=0.1) or 0.01 15 mS/cm (K=1.0)
- temperature range up to 55°C, maximum pressure: 6 bar at 20°C

Brief description

Conductivity cells in the 202923 series are used, for instance, in general water engineering, air conditioning and refrigeration, drinking and bathing water, and in industrial rinsing and process water circulation. The PVC body material restricts their application to media temperatures up to 55°C. Two variants with the cell constants K=0.1 or 1.0 can be supplied.

Versions with the popular thread sizes G3/4" or G1" as well as a pluggable style are available for installation. The pluggable version is appropriate for use, for instance, with suitable PVC tees in the nominal sizes DN25, 32 and 40. It enables fast de-installation of the sensor for cleaning and maintenance. According to choice, the electrical connection is made either by a detachable connector or an attached cable.

The overall construction and the wetted components are physiologically harmless. Stainless steel (K=0.1) or special graphite (K=1.0) is used as the electrode material. The temperature probe, which can optionally be integrated, simultaneously acquires the temperature of the medium, for temperature compensation in connected instrumentation amplifiers.

Stainless steel variant K=0.1: The cell features 3 metallic pin electrodes. The two outer pins are electrically connected and form one pole of the 2-electrode cell. The stainless steel pin in the middle is the counter electrode. This arrangement ensures highly accurate measurement with narrow stray fields. A temperature probe can be integrated into the middle pin.

Graphite variant K=1.0: Physical requirements necessitate using a special graphite as electrode material for high conductance measurement. The two graphite electrodes are completely integrated in the electrode shaft. The optional temperature probe is housed in a stainless steel sleeve that is immersed in the solution under test.

Principle of operation

The 20.2923 series measuring cells are 2-electrode cells. An a.c. voltage is applied by means of a transmitter. The current flowing through the liquid and the electrodes is determined by the conductivity of the liquid.

Technical data

Cell constant¹ K = 0.1 or K = 1.0

Typical measuring ranges² 0 - 1.0 mS/cm (with K = 0.1) 0.01 - 15 mS/cm (with K = 1.0)

Temperature compensation optionally with Pt100

Process connection screw-in thread G³/₄A; G1A; union nut DN25; 1¹/₂" for PVC tees

Body material PVC

Cell material stainless steel 1.4571 (with K=0.1) graphite (with K=1.0)

Operating temperature up to +55°C Maximum pressure 6 bar at 25°C

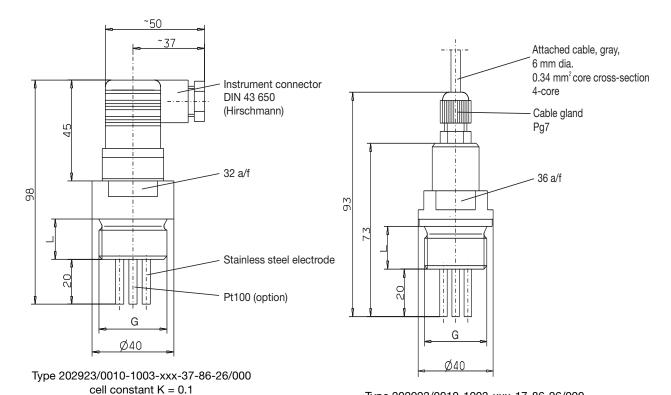

Electrical connection instrument connector (Hirschmann) to DIN 43 650, IP65 protection or

5 m attached cable, other cable lengths on request.

Any deviation of the cell constant can be adjusted on the transmitter.

The measuring ranges also depend on the transmitter that is used.
When used for wider ranges than the "typical" ones, measurement errors caused by polarization may occur.
