Your partner for  
Industry 4.0 solutions

## NUOVA ELVA AND AUTOMATIONPLUS

Two complementary and interconnected companies at your service, offering smart production solutions. An eclectic mix of experience, know-how and innovation with an eye to the future.

**Nuova Elva** - specialised distributor of industrial automation and process control components aimed at original equipment manufacturers (OEMs), installers and end users in all industry sectors.

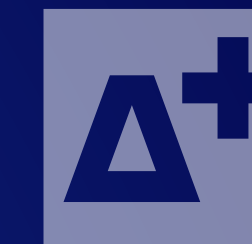

**AutomationPlus** - a team of expert system integrators providing customised solutions for automating manufacturing processes, in line with Industry 4.0.

With our trusted expertise and experience, we help you choose the right components and solutions for your needs.

**NUOVA ELVA**  
specialists in automation

**Nuova Elva** markets and distributes industrial automation components to original equipment manufacturers (OEMs), installers and end users in all industry sectors.

The company also offers a range of services and solutions designed to optimise processes, boost productivity, reduce costs and align organisations with Industry 4.0.

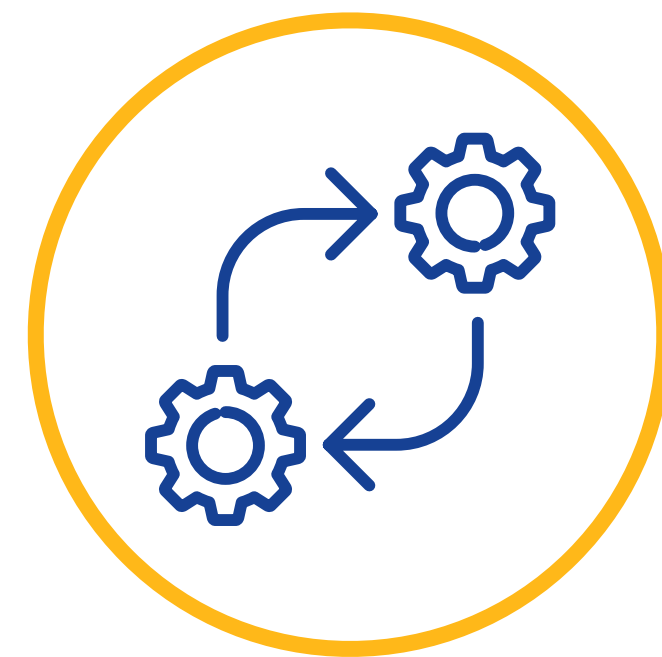

**NUOVA ELVA**  
specialists in automation

Choosing **Nuova Elva** as your industrial automation partner means:

Greater safety,  
reliability and  
productivity

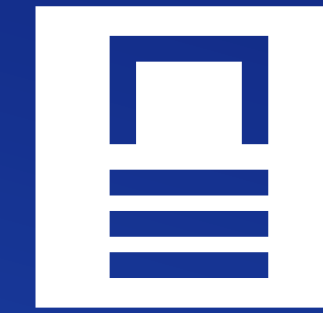

Preventive replacement  
of obsolete and/or  
wear-sensitive  
components

Professional and  
complete support  
service delivered by  
highly qualified and  
experienced staff

Lower operational costs;  
reduced fiscal burden;  
stock always present

## PRODUCT CATEGORIES

### **PNEUMATICS**

Pneumatic Actuators, Handling Systems, Vacuum Technology, Valve Units, Pneumatic Connection Fittings

### **ELECTRICAL**

Switches, Contactors, Power Supplies, Inverters, Switchgear Components, Motors, Transformers

### **AUTOMATION**

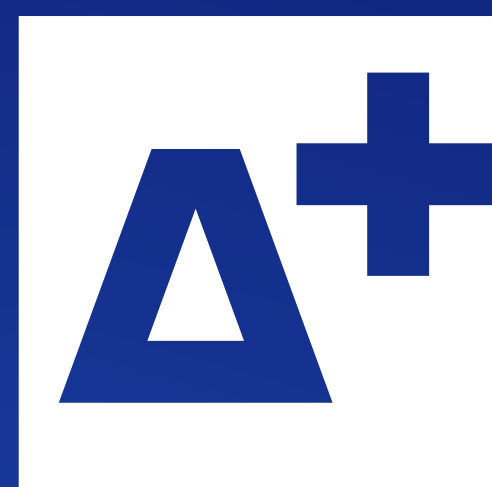

PLCs, Sensors, Safety, Robotics

### **HYDRAULICS AND PROCESS**

Valves, Sensors, Regulators, Transmitters

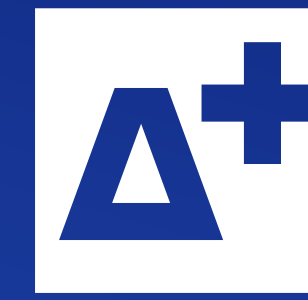

# AUTOMATIONPLUS

smart process optimisation

**AutomationPlus** plans, designs and installs machines for the control of industrial processes.

Our experienced and qualified engineering technicians create customised automation systems in various industry sectors such as food, chemical, petroleum, plastic, automotive, textile, paper and metalworking.

**AUTOMATIONPLUS**  
smart process optimisation

- Advanced, interconnected production systems that provide flexibility and performance, such as automatic material handling and robotics.
- Technology, data exchange and energy saving are synonymous with quality, flexibility and reduction in costs.
- Machines that integrate the concept of new production technologies that create synergies between all elements of production.
- Smart Factory, Smart Energy and Industry 4.0 transmit the concepts of collaboration between operator, machines and tools, to improve working conditions and increase productivity and quality.

These are the keys to meeting the requirements of an increasingly attentive consumer and to making the manufacturing industry more competitive on a global level.
